The Golf π indoor golf simulator is entirely independently developed, targeting the indoor golf training and entertainment needs of Chinese users. It is the first to combine high-precision sensing, trajectory prediction, and intelligent interaction technologies with high-precision course rendering, upgrading the traditional simulator experience and comprehensively improving training accuracy and interactive experience, enriching entertainment functions, and providing users with a new generation of intelligent indoor golf solutions.

This manual is for general daily operation. For other questions, please contact our technical staff by phone or email.

Due to continuous product updates, our company reserves the right to modify the technology and product specifications without prior notice.

I. System Composition

Main components of a golf simulation system:

NO.	Name	quantity	Remark
1	Binocular vision sensor	1	High-speed capture, powerful computing unit, intelligent supplemental lighting
2	Anti-hit curtain	1	Seamless impact-resistant special curtain
3	Touchscreen mirror all-in-one machine	1	Ultra-thin frameless mirror design
4	HD projector	1	Optional
5	Fully automatic intelligent ball loading machine	1	Embedded automatic ball ejector
6	Soft packaging repair	1	Optional

II. System Site Requirements

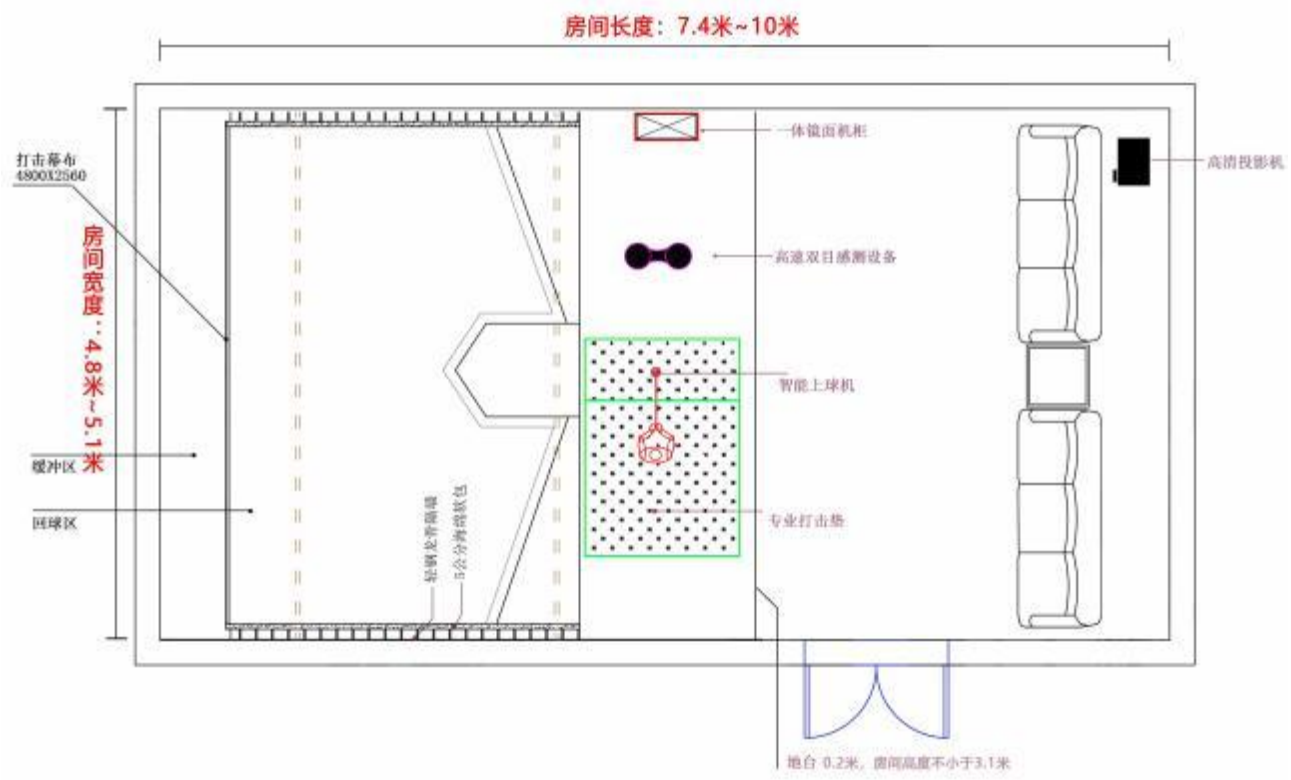

1. Power and Network Configuration:

A 220V, 50Hz power supply of at least 750W with a ground wire is required. A circuit capable of handling 15A of current is also needed for the simulator.

An internet interface is required for network technical support.

2. Installation Space Requirements:

Recommended space: Length 7.4m ~ 10m (L); Width 4.8m ~ 5.1m (W); Height greater than 3.1m (H);

3. Indoor Environment and Ventilation

The installation site should be kept clean and dust-free.

The ventilation system should be in good working order to ensure a good air environment during operation and to promptly dissipate heat generated by the equipment.

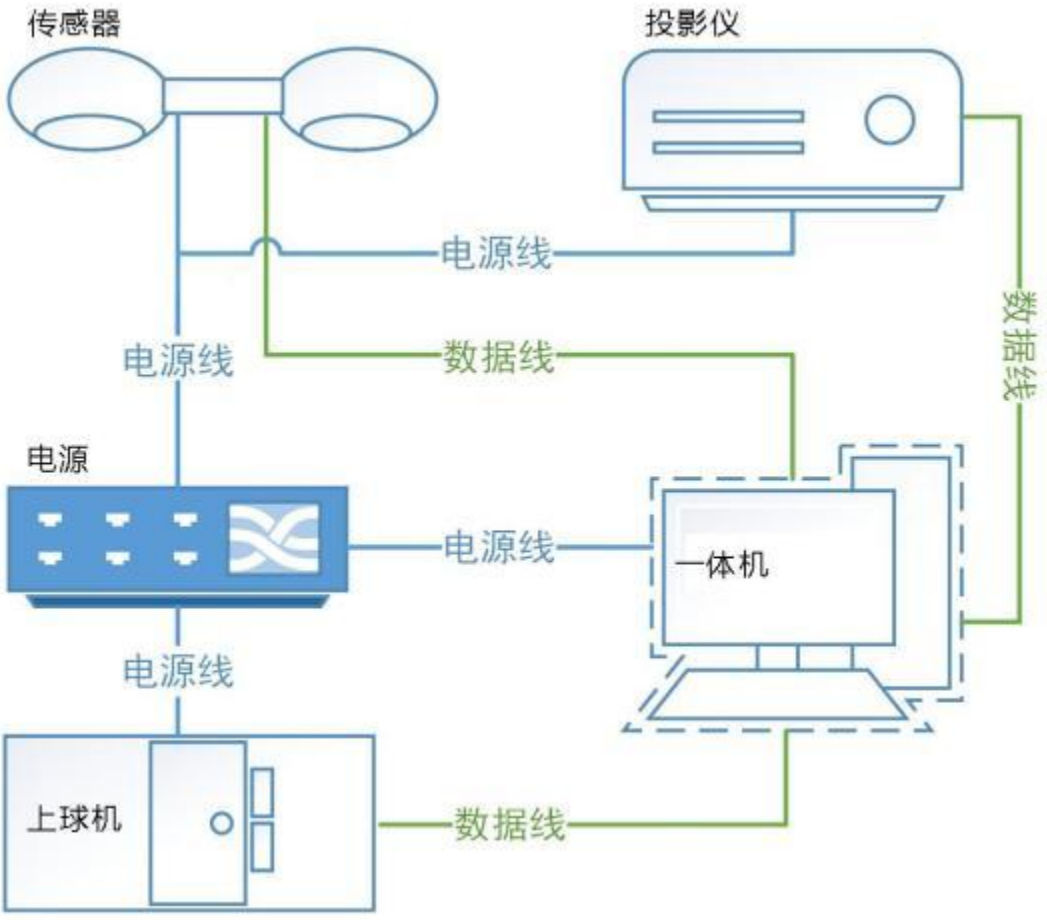

4. Lighting System Requirements

Lighting negatively impacts simulator image quality. The darker the lighting conditions, the better the simulator's image quality. Avoid installing the system facing outdoor light sources or large ceiling lights.

Ideally, install a curtain or tinted glass window to block external light sources from entering the system installation area.

III. System Connection Diagram

1. Diagram

2. Cabling Requirements

When cabling, ensure the cables are of sufficient length to avoid installation or usage difficulties caused by excessively long or short cables. Additionally, use cable trays or conduits for securing and protecting

the cables. Finally, after cabling is complete, inspect and test the wiring to ensure stable connections and compliance with requirements.

IV. System Installation

1. Shock-Resistant Screen Installation

The screen installation requirements are: flat, without obvious wrinkles, and with good shock absorption.

2. Projector Installation

Depending on the site conditions and the type of projector chosen, there are two installation methods: front projection and side projection.

Front Projection: Users of ordinary commercial projectors should refer to this installation method. The center of the projector lens should be on the vertical plane of the center of the screen.

Side Projection: Users of industrial projectors should refer to this installation method. Utilizing the left and right keystone correction function of industrial projectors, the projector can be installed off-center from the vertical plane of the screen, reducing dependence on height.

Projector Installation Position: Different projectors have different focal lengths. Under standard installation dimensions, the distance from the center of the projector lens to the screen is generally not less than 6 meters.

3. Installation of binocular vision sensor

According to the requirements of the golf simulator system and construction drawings, fix the sensors in the correct positions and ensure a stable connection between the sensors and the computer.

4. Installation of the integrated mirror unit

Secure the integrated mirror unit to the position indicated on the design drawings. Fix the base bracket according to the equipment's installation requirements, ensuring the mirror is stable and at the correct angle.

5. Installation of intelligent PTZ camera

According to the equipment installation instructions, install the intelligent ball launcher on the fairway and connect it to the system control terminal. It is necessary to ensure the ball launcher is positioned accurately on the fairway to ensure successful ball delivery.

V. System User Manual

1. Power-on Procedure

1) Power on and preheat the projector;

2) Power on the all-in-one projector;

3) Double-click the Golf π icon on the desktop to enter the system;

4) Perform a system check before use;

All-in-one projector: Check the all-in-one projector's wiring connections and system operation for proper functioning.

Projector: Check the projector's color and clarity for proper operation.

Sensor: Check the wiring and sensor data acquisition for proper functioning.

Spherical projector: Check the spherical projector's projection for proper ball movement.

Screen: Check the screen's spring hooks for any loosening.

5) Golf π System Main Interface (as shown below)

2. Instructions for using the Golf Party WeChat Official Account

1) Registration: New users can scan the QR code within the system using WeChat or search for the "Xiaoru Sports" official WeChat account to follow and register their user information.

2) Function Description: Provides data interconnection functionality between official accounts, facilitating the uploading of playing videos, data analysis, and viewing of overall rankings. Supports uploading playing data from both the court and practice ranges, facilitating tournament registration. Offers membership points and online store redemption features; allows for remote control of equipment via mobile devices.

3. Quick Start Guide

1) Practice Mode: Select Practice Mode from the main interface → Select Regular Practice or Course Practice → Select Course → Add Player → Start Training

2) Course Mode: Click Course Mode from the main interface → Select Course → Rules Preset → Player Preset → Start Course

3) Entertainment Mode: Click Entertainment Mode from the main interface → Select Gameplay Mode → Add Guest → Start Entertainment

4) External Buttons: Up button releases the ball or raises the tee; down button lowers the tee; left and right buttons adjust the aiming line.

5) Common Settings:
TEE Height, Automatic Shot Replay, Club Selection.

4. Detailed User Guide

1) Competitive Play: In this mode, users can compete in virtual golf against other players. You can choose different opponents, such as computer AI or other online players. The system calculates the score based on each player's shot and displays it on the screen. This mode is suitable for players who enjoy competition and challenges.
2) The process for the adversarial mode is as follows:

1. Create a room name, set a room password and the number of people in the room.

2. Choose a court.

3. Rules settings: OK distance, TEE selection, single hole scoring, consecutive putting, weather, green speed, putting guide lines.

4. Environmental settings: wind direction and wind speed.

5. Start the battle.

6. The user interface for the "Combat" function is shown below:

7. Data Analysis: A summary analysis table of the data becomes available once the match concludes.

Competitions

The Tournament Mode allows users to participate in a variety of simulated golf competitions—ranging from recreations of renowned domestic and international tournaments to online matches organized by the system. Through this mode, users can experience the tension and excitement of competing in formal events, while simultaneously honing their technical skills and strategic prowess.

The tournament mode workflow is as follows:

1. Event Selection: Regular Season, Home Run Derby, Tournaments.

2. Player Login: Manual Entry, WeChat Scan-to-Log In.

3. The operational interface for the "Events" function is as follows:

4. The match interface is as follows:

2) Exercises

The Practice Mode constitutes a vital component of the golf simulator system, offering a diverse array of training options—including general practice sessions and course-specific drills. Users can repeatedly practice their swings and shots in a pressure-free environment. The system provides detailed statistics and analytics, alongside features such as swing analysis and shot replays, enabling users to gain a comprehensive understanding of their swing mechanics and shot outcomes, thereby facilitating technical improvement.

Multifunctional Driving Range: An integrated training module covering the trifecta of golf skills—full swings, chipping, and putting. The system automatically records and displays the player's average shot distances relative to targets, while also allowing for the flexible customization of chipping distances. The interface ensures smooth, seamless operation, offering a user-friendly and highly efficient training experience.

Free Practice Mode: Allows users to select specific real-world golf courses for targeted training. Players can choose to focus on repetitive drills from various locations—including fairways, bunkers, tee boxes, and greens—to enhance their proficiency and familiarity with actual course conditions.

The Practice Mode workflow is as follows:

1. Selection of "Routine Practice" Venues: There are three types of practice venues.

2. "Course Practice" Course Selection: The system features 100 high-precision domestic golf courses.

3. Player Settings: Add and modify player information.

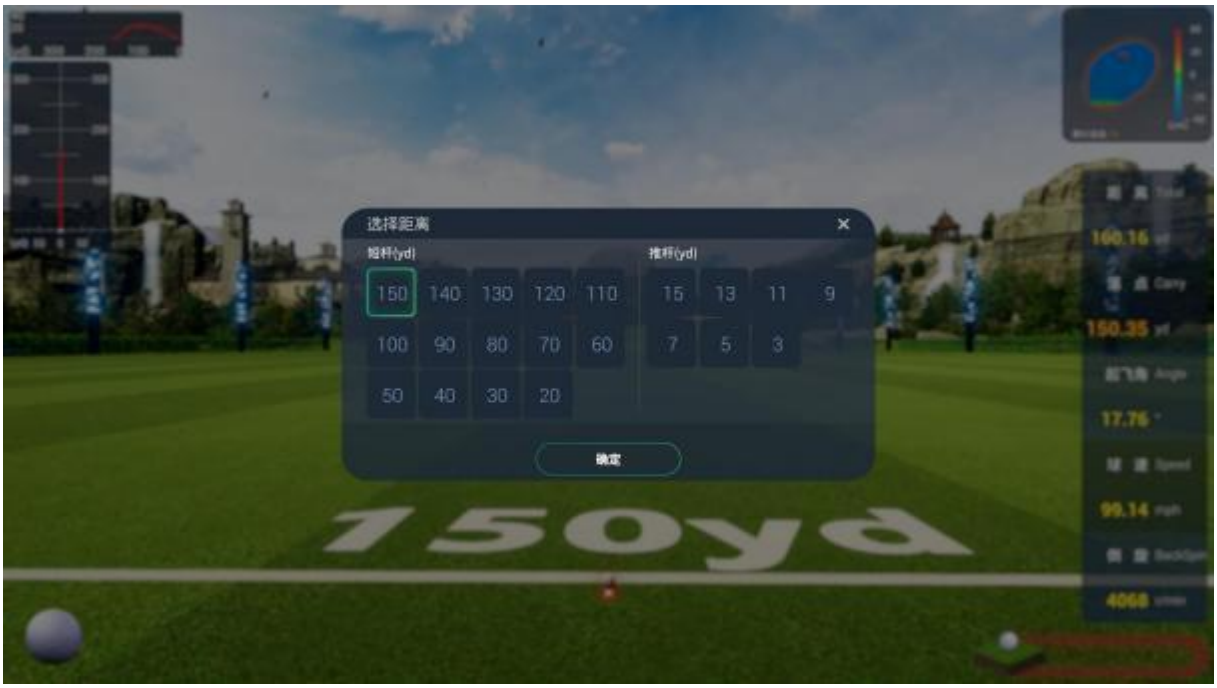

4. Wind Settings: Wind Direction, Wind Speed.

5. Target Configuration: Target Distance Setting.

6. Distance Selection: Switch modes to select the target distance.

7. Practice Range Interface

8. Flight Interface

9. The operational interface for the "Routine Practice" function is shown below:

10. The operation interface for the "Court Practice" function is shown below:

11. Data Analysis: Upon completion of the practice session, a summary data analysis table will be displayed.

3) Consequences

"Course Mode" simulates the authentic experience of playing on a real golf course. Users can select from a variety of courses available within the system to play a simulated round, allowing them to experience the unique designs and styles of different courses. The system calculates the ball's flight path and final landing point based on the user's shots, delivering an experience that is as close to real-world golf as possible.

Course Mode also features a range of engaging gameplay variations:

Standard Modes: Individual Play, Team Play, Stroke Play, Match Play, Four-Ball, and Foursomes.

Recreational Modes: Las Vegas, Dou Dizhu, Tiger, Meat, Top the Hole, and Pot Games.

The procedure for the next-round mode is as follows:

1. Course Selection: Over 100 real-world courses—both domestic and international—are available to choose from.

2. Minimap Preview

3. Rule Presets: Different game modes feature specific gameplay introductions and rule settings.

4. Player Settings: Add and modify player information.

5. Real-time Court Display

6. Court Interface

7. Batting Interface

8. The operation interface for the "Next Player" function is shown below:

9. Data Analysis: Upon completion of the exercise, a summary data analysis table will be displayed.

4) Entertainment

The Entertainment Mode offers a range of engaging features for the golf simulator system, such as Bowling Battle, City Battle, Landing Challenges, and Cliff Approach games. These features not only enhance the enjoyment of the activity but also serve as excellent components for social gatherings, allowing even non-professional players to experience the fun of golf simulation. The Entertainment Mode is divided into two categories: Single-Player Mode and Online Mode.

The process for Entertainment Mode is as follows:

1. Gameplay Selection Interface:

2. "Online Entertainment" — Create Room:

3. "Online Entertainment" Room Settings:

4. The operational interface for the "Online Entertainment" function is shown below:

5. "Single-Player Entertainment" Scene Selection: Add Guests.

6. The four interface scenes for "Single-Player Entertainment" are as follows:

Bowling Battle

City Showdown

Landing Challenge

Cliff Approach to the Green

7. The "Single-Player Entertainment" mode features four scenarios; the functional operation interfaces are as follows:

5) Detailed Settings

System Settings: The button is located in the top-right corner of the main interface, allowing users to adjust settings according to their usage preferences.

1. Basic Settings: Volume, Music, Use Xiao Ru, Language.

2. Advanced Settings: Password-free Access, Password Settings, Live View Angle, Putting Guide Lines, Smart Caddie, Cache.

3. Lock Screen Settings: Set Timer, Cancel Timer.

4. Mode Settings: Carry Distance, Side Spin Distance, Flight Distance.

5. Image Settings: Current Quality.

6. Version Information:

5. Shutdown Procedure

First, exit the golf simulator system; then, shut down the all-in-one computer; finally, turn off the projector.

VI. Other Matters

1. Software Updates

When performing system updates, ensure that all data is backed up to prevent data loss during the update process. Additionally it is recommended to conduct comprehensive system testing after the update to verify that the system functions correctly and does not introduce any new issues. If users are unfamiliar with the update process, it is advisable to contact a professional or a service center for assistance.

3. Equipment Maintenance

1) Regular Cleaning

4. Cleaning the Mirror-Integrated Unit: Periodically wipe the mirror surface with a cloth to remove dust and stains, thereby preventing scratches.

5. Cleaning the Sensors: Ensure that the sensor surfaces remain clean and free of dust and stains to avoid compromising detection accuracy.

6. Cleaning the Projector: Periodically clean the projector lens and optical path to maintain clarity and enhance projection quality.

7. Hitting Mat: Periodically use a vacuum cleaner to remove debris and dust from the hitting mat.

8. Ball Return Area: Periodically use a vacuum cleaner to remove debris and dust from the ball return area.

9. Maintenance of the golf simulator system should be performed according to actual usage conditions. In the event of any issues or anomalies, it is recommended to promptly contact professional personnel or a service center for inspection and repair. Regular maintenance effectively minimizes the frequency of malfunctions, extends the system's service life, and ensures that the golf simulator consistently operates at its optimal performance level.

3. Safety Guidelines

1) Ensure that all cables and equipment connections are secure and free of looseness to prevent short circuits or equipment damage.
2) Periodically inspect system components—such as sensors, projectors, and ball-feeding machines—to ensure they are functioning correctly and free of anomalies.
3) Before use, please carefully read the system's operating instructions to ensure proper usage.
4) Ensure that the room is well-ventilated to prevent physical discomfort caused by prolonged physical activity in an enclosed space.
5) During use, strictly adhere to safe ball-striking principles.
6) Children and adolescents must be supervised by an adult during use to prevent accidents.
7) Individuals experiencing physical discomfort or with limited mobility are advised to use the system under the supervision of a professional.
8) While a ball is being struck, do not approach the hitting zone to prevent injury.
9) When performing maintenance or cleaning the equipment, always switch off the power supply to ensure safety.

By following these safety guidelines, you can ensure your own safety—as well as that of others—while enjoying the fun provided by the golf simulator. Should you encounter any issues or anomalies during use, please contact a professional or the service center promptly for inspection and repairs. We hope you enjoy your experience!

7. Troubleshooting

1. Hardware Equipment

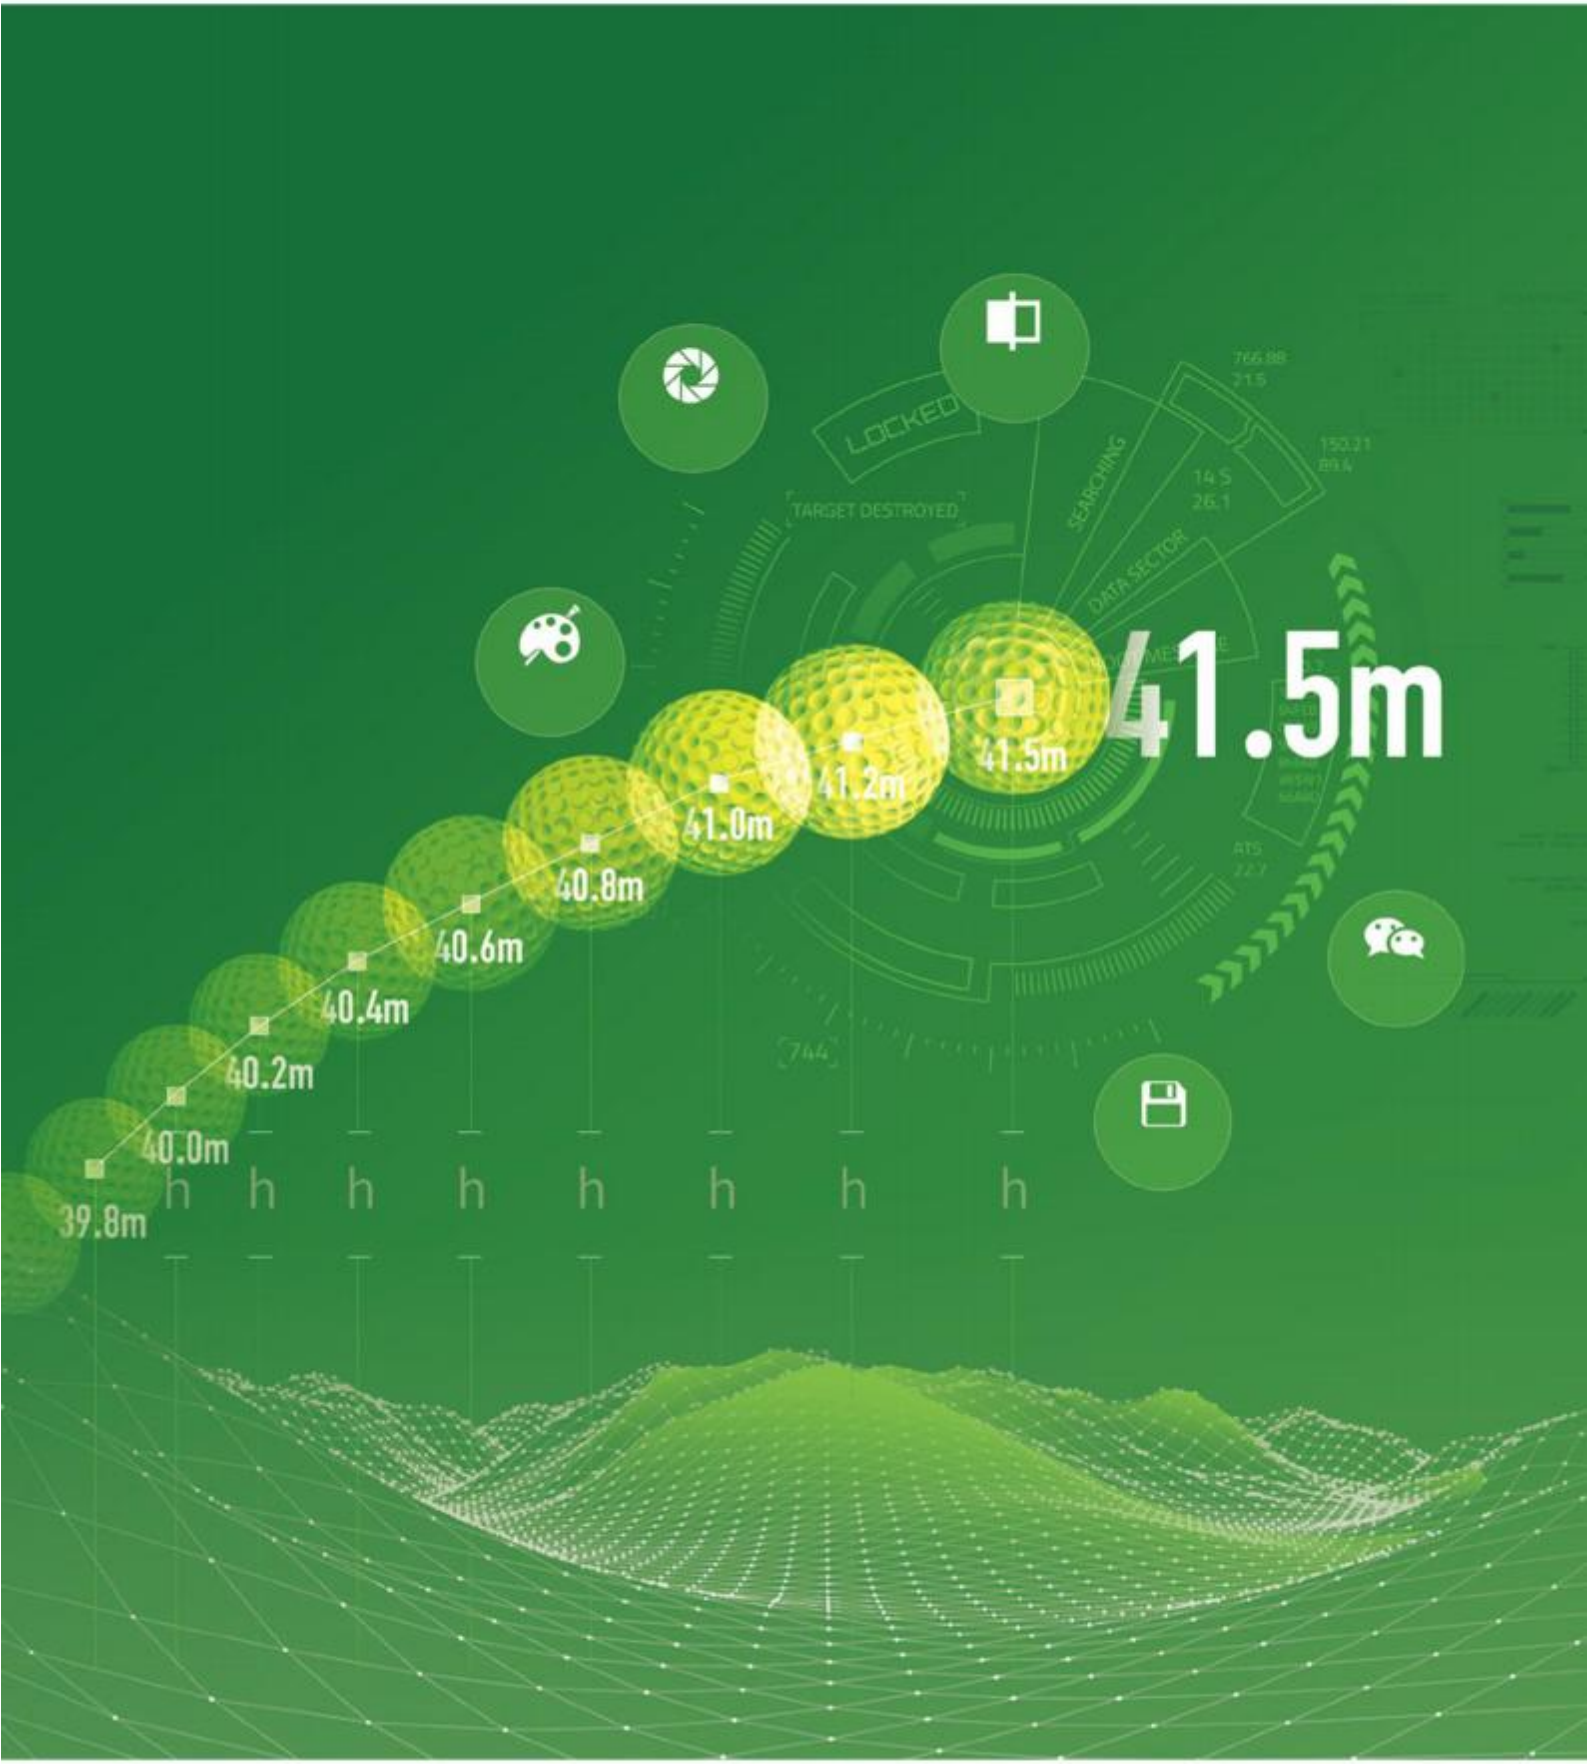

First, inspect the integrated mirror unit for any scratches, stains, or damage, as these may compromise performance. If any issues are detected, the affected components must be cleaned or replaced.
Check the dual-camera vision sensors for any damage or dust accumulation, which could adversely affect ball tracking accuracy. If problems are identified, the sensors must be cleaned or any damaged components replaced.
Verify that the projector is functioning correctly, ensuring that the brightness, contrast, and color settings are configured properly If the projector malfunctions, it may be necessary to adjust the settings or replace the unit.
Check the ball feeder mechanism to ensure it is loading balls correctly and that no balls are jammed or damaged. If any issues are discovered, the ball feeder must be cleaned or replaced.
Inspect the projection screen for any wrinkles, stains, or damage, as these may detract from the projection quality. If any issues are detected, the screen must be cleaned or replaced.

2. Software System

Restart the software to see if normal operation is restored.
Check for software updates to ensure you are running the latest version.
Review the software settings to confirm that all configuration options are correct.

If you are unable to resolve the above issues yourself, we recommend contacting professional after-sales support personnel for assistance.
